

PL Image of four sample industrial cells showing LID after light soaking. Yellow is as received Blue is after light soaking

PL Image of four sample industrial cells showing no LID after Hydrogenation. Left is as received Right is after light soaking Note: these cells have higher efficiency than directly out of the factory even after light soaking.

**LIGHT SOAKING** models the LID experienced over a 30 year exposure to sunshine

Efficiency difference between Hydrogenated and non-hydrogenated cells before and after light soaking
